Dale P. Clemens's *Advanced Custom Rod Building* is the book that sent American fishermen back to their workshops. Accordingly, Clemens explains the principles necessary for making custom tackle that is superior to anything off the rack, as well as exhaustive figures, illustrations, and tables for the experienced builder. The book contains invaluable advice on how to build rods of every kind, how to choose (and make) the best blanks, seats, handles, grips, and guides, and how to finish and seal rods to make them as handsome and durable as possible. Stunningly detailed and thorough, *Advanced Custom Rod Building* is a complete guide to building a fisherman's most essential tool. 168 b/w photos and illustrations, 29 color photos.

This is the standard by which other rod building books are rated

By Larry McDevitt

I once had a copy of the first edition of this book and loaned it out--of course it was never returned. The second edition is updated with even more information. Dale Clemens was not only a first rate rod builder, but was also the owner of what was, at the time the largest rod building supply business in the country.

The book has a lot of information on rod components tested by the company before it was offered for sale in their catalog. Some of the information is dated, but most of it is still germane today. Every rod builder should have a copy of this book on their reference shelf.

Everything you might want to know and then some.

By BLeaver

So far, this book covers building fly rods from beginning to end and as I said, then some. There is a lengthy discussion of how the blanks are made and the reasons why some cost more than others (I thought that was particularly interesting).

You will probably sit down and read sections at a time, not straight through from beginning to end.

A superb reference manual.
