## Review

The Old Schoolhouse Magazine

"I really enjoyed *Amazing Kitchen Chemistry Projects You Can Build Yourself*. I found the explanations of chemistry concepts easy to understand, the experiment instructions easy to follow, and the supplies easy to find...Ms. Brown did an excellent job of explaining the concepts but not oversimplifying the vocabulary or the concepts...It provides a lot of real-life information that answers the questions "Why do I need to learn this?" and "When has learning this subject ever been helpful to anyone?"...I highly recommend this book."

## Children's Literature Review

"...This tidy kid-friendly book is crammed with activities and information on chemistry ... Lots of science information is mixed with the how-to of the projects and there is hardly a blank space on a page anywhere in the book. ...A very nicely done and reasonably priced collection."

Roald Hoffmann, 1981 Nobel Prize winner in Chemistry

"Chemistry experiments in the kitchen! From mysterious oobleck to soda rockets, this book is the greatest fun. I can't wait to try some of these experiments. The grandchildren? They will have to wait."

Stephen S. Bates, PhD, Research Scientist, Toxic Phytoplankton, Fisheries and Oceans Canada

"I wish I had grown up with this book! I know it would have peaked the curiosity of my own, now-grown boys."

Peter Agre, M.D., 2003 Nobel Prize winner in Chemistry

"When young people actually put their hands on scientific projects, they realize how much fun science really is."

Mike Young, Fifth Grade Teacher, Pittsburgh, PA winner of the National Science Foundation's Teacher of the Year award

"Learning about the world of chemistry is fun and exciting for the whole family in *Amazing Kitchen*

Chemistry Projects You Can Build Yourself. If you know someone interested in chemistry, this is a book they will love."

Anne Hall, Associate Research Scientist, Lovelace Respiratory Research Institute, and former science teacher

"These intriguing projects give children practice in doing something to change the world (adding different ingredients, heating or cooling, mixing—we scientists call this “doing an experiment”), seeing what happens (“observing carefully”), and playing around (“testing variables”). And even better, it’s safe—no toxic chemicals or special equipment needed beyond what’s found in a kitchen and grocery store."

From the Back Cover

In *Amazing Kitchen Chemistry Projects You Can Build Yourself*, kids ages 9 and up will experiment with kitchen materials to discover the basic concepts of chemistry. Readers will learn about atoms, molecules, solids, liquids, gases, polymers, the periodic table, the important history of science, and much more. Along the way, they'll make goop, cause chemical reactions, and create delicious treats, and all of it will illustrate important chemistry concepts. *Amazing Kitchen Chemistry Projects* is a fun and exciting way for young readers to learn about chemistry, a subject that could otherwise seem dull, and become scientists while they're at it.

*Amazing Kitchen Chemistry Projects* meets Common Core State Standards for reading informational text and is aligned with Next Generation Science Standards. Guided Reading Levels and Lexile measurements indicate grade level and text complexity.

**Chemistry in the Kitchen--Easy!**

By Gwynne C. Spencer

This tidy kid-friendly book has 122 pages crammed with activities and information on chemistry as well as support material in each chapter focused on Words to Know, Did You Know? and What's Happening? as well as a brief list of Supplies and boldly numbered steps of how to do each project. Featured projects (they do not call them experiments) include Make Your Own Buckyball; Make a Model of a Water Molecule; Separate Leaves and Dirt; Make a Chroma-Color Bookmark; Extract Iron from Cold Cereal; Make an AlkaSeltzer Rocket; Make Rusty Shapes; Clean Your Pennies; Make a Foamy Volcano; Make Eggs Lose Their Shells; Make Invisible Messages; Make Your Own Crystals; Make Rock Candy; Make a Candy-Glass House; Make a Wave Tank; Layering Liquids; Make an Octopus Diver; Put an Egg in a Bottle; Exploding

Mentos; Swimming Raisins; Stretchy Taffy; Prove that Hot Water Freezes Faster Than Cold Water; Make Vanilla Ice Cream; Make Oobleck and Silly Putty. Lots of science information is mixed with the how-to of the projects and there is hardly a blank space on a page anywhere in the book. Lots of sidebars on related topics, small factoids that tie to the subject fill each chapter to the tippy top. There are 10 chapters: Atoms, Mixtures, Reactions, Acids/Bases, Solids, Liquids, Gases, Change of State, Polymers, Water as well as a glossary, index, extensive list of websites, and book resources. Most projects are safe enough for kids to do without too much adult supervision, and there is a great deal of information packed into this volume. The illustrations don't have kids in them, so it could even be used with adults. A very nicely done and reasonably priced collection.

Too basic

By haley

This book was VERY basic. I bought it because I was teaching a chemistry class to 5th and 6th graders at a summer camp. I wanted to do a morning on Kitchen Chemistry but this book did not provide me with any good ideas. All of the labs they present are extremely simple and you could very easily find better ones for free on the internet.

Great home science book

By Nancy B. Kennedy

Kitchen Chemistry is a terrific book of science activities. (Shhh! Don't call them "experiments"! That's a scary word.) I did most of them myself, as well as others, while I researched my own science activity books. Some books of science activities promise simple projects and reliable reactions, but this one really does deliver. And, as with all of Nomad Press's books, the text is well written, enlivened with factual stories, and appropriate for the age group.
