More than a mere listing of chemicals is needed.

By CH

While the completeness of the information exists, the text falls short of providing specifics on how certain substances are used and the implications of their presence in a laboratory or other production facility. I would have hoped for more than a mere listing of the chemicals used. Perhaps I would have found greater value in learning how, that is from what common sources, the chemicals are obtained, what they do in the production, i.e. why they are important, and perhaps what substitute chemicals could be used if the most widely used chemicals were unobtainable.

Well done resource

By S. B. King

One of the best resources we've run across in our review of references dealing with different types of labs a responder might encounter. The information is well organized and thought out.
