IMAGINE is the second book of the Fuzed Trilogy.

A man and woman stand on a South American cliff top overlooking the Atlantic. The muted sound of surf rises from below as they hold hands and gaze across the ocean. Silhouetted by the setting sun, hair tousled by a tropical breeze, it would be remarkably romantic ... if not for the end of the world.

\*\*\*

"The tissue sample appears to contain a complete human genome ... but it's missing half of the normal DNA."

\*\*\*

The aircraft carrier INS Vishal's catapult launched Commander Mammen's Rafale fighter as the lead aircraft of the strike group. As he flipped on the Master Arm switch, the missile launch button was live, and with it, the ability to start World War III with his thumb.

A true story ... we hope never happen. A portion of all profits will be donated to non-profits working to protect humanity.

Brilliant Sequel. Does Not Disappoint! This Series Just Gets Better! Bring on Book 3. A Must Read!

By Peter Younghusband

Another very impressive work by Stevens! This follows on very nicely from Impact, Book 1. I was very fortunate to have been given an unedited version from the author. It was so good to be able to read this next

installment straight after the previous. Again, this is a cannot-put-down novel, action packed, mystery and suspense. Josh is in deep in the action and intrigue, as usual, and in his element. It is really good to have characters from Book 1, Tim Smith, Brian Davidson, Greg Langlois and of course, Elizabeth return as well.

In my review of Impact, I stated I was looking forward to seeing the relationship develop further between Josh and Elizabeth and in this novel, their relationship has resulted in marriage and they seem very happy indeed. Very happy with this.

Stevens continues the plot regarding the comet that was left unfinished in Impact and this, while giving closure to the comet storyline, helps set the plot for this novel. Smooth transition from the former storyline to this installment. Stevens is a master at storylines flowing smoothly.

Readers of this review beware! From this point on, I do discuss some things that may spoil it for those who have not read this novel yet, but I include them not to spoil the plot for these readers, but to show how masterfully Stevens has dealt with the issues he includes in this novel. So scroll down if you want to continue reading and don't mind what I include for the rest of the review.

It is an effect of the comet that has a major influence on the plot line in this novel. It seems that each of the three (or 4, yes there may be a fourth) novels will contain a theme that Stevens sees as a major threat to life on this planet either including all life on earth or specific threats to the human race. It is the latter that is portrayed in this novel. Not only does Stevens portray how technology, in this case, computer technology, can get out of hand, but highlights how the human race would/could deal with artificial intelligence (AI). It raises the questions on how does the human race control AI and do we consider AI as a living entity? Do we give it the same rights as the human race? Do we consider the human race as the authority that AI answer to and is accountable to? Will the human race remain fearful of AI? How do we learn to co-exist in a mutual and beneficial relationship? Does AI have a soul? If there is a God who is Creator, where does AI fit in with this?

These questions were treated very well and balanced by Stevens, and in doing so, gives us some very serious technical, ethical and practical issues to consider in dealing with this potential new reality. He is very masterful in including the technical aspects of how AI could develop and also very skillfully portrays the pitfalls of our software in relation to AI. When a software virus gets out of control and shuts down everything controlled by software worldwide, Stevens illustrates just how reliant on software we are. He does so through the character of President Yager who states,

"Without our software, we lose communication and control, without those, we lose transportation, and without that, the flow of food stops followed by power and water. This nightmare may have been beneficial in showing us how vulnerable we are. With our total dependence on complex technology, we're a few short steps from anarchy."

Through another character, Shearer, Stevens continues this theme,

"Our critical infrastructure, power, water and communication must be controlled by hardware, not software. We must use EMP hardened electronic controllers and dedicated communication links that can't be affected by software, Critical services, such as food and fuel stores, must have software-free backup systems, so we can manually activate fuel pumps and accept paper currency. It's not just artificial intelligence we have to worry about: a massive solar storm could also bring us to our knees."

Here, Stevens seems to be giving a solution and challenge to this potential threat to how we live and whether

we return to the pre-electronic age. As with the previous novel, and I presume with the others to follow, Stevens writes of these threats with passion and concern for the earth and all life, not just for the human race. He challenges us that if we identify of these threats, then with unity, co-operation, knowledge of science and technology, we can work towards a solution to either preventing them or minimising their effects.

Stevens is one author who successfully blends suspense, science and technology, a touch of the supernatural, romance, mystery and intrigue into one very entertaining, educational, thought provoking novel.

After reading this instalment, I am even more eager to read Book 3, and to see the movie versions of this series.

This instalment is a must-read!

Highly Recommended.

Josh Fuze returns

By Ryan Deken

When Impact (aka Resurrect) first came out in 2012, David E. Stevens had built a wonderful thought provoking adventure out of an apocalyptic world scenario. It had action, romance, drama and adventure. The characters were very dynamic and relatable – thus drawing you into the story.

With the second chapter of the Fuzed series, I will admit that the basic premise behind Imagine had me a bit skeptical about whether it could really measure up to the standard set by the first. It was an interesting concept about collective power of cell phone technology becoming smarter and more powerful than even those that created it, but could this really make for a good novel?

The answer was yes. Imagine didn't just measure up to the standard set by the first novel. It surpassed it.

This book starts off right where the first one left off. We see the return of familiar characters and the arrival of new ones. After narrowly escaping certain doom from the comet hurtling toward the Earth, Josh Fuze receives a message on his phone with one word, "imagine." Then, things turn from the bizarre to the dangerous. It appears that skilled hackers have cracked into global cell phone networks causing increasingly wide spread damage. Stock markets, GPS navigation systems, and even secret CIA files are all affected. The world appears to be on the verge of a catastrophic economic meltdown – except one country that is not affected. It appears that China has not adopted the use of the technology that is presumed behind the attacks. Could this be a coincidence or a dangerous plan to bring the rest of the world down on its knees?

Imagine is a fast-paced ride with characters that are both dynamic and realistic, and there are plenty of surprises that keep you flipping through the pages. The story is not only dramatic and interesting, but it may be more realistically plausible than anyone has ever realized. With Imagine, Dave Stevens not only shows that he's got intellect and talent, but that he also has the skills and abilities of an accomplished author that will stand the test of time. Two stories down. Looking forward to many more.
